Case Studies

QC DATA[®]

“ When I need a map, I need it quickly and to budget. Sterling Geo have the flexibility, talent, responsiveness and enthusiasm to get the job done. **”**

Ian Wainwright, Managing Director - UK and Ireland, QC Data

QC Data provides a complete solution for clients from tender stage to professional engineering support.

When their clients, major engineering organisations, are tendering for a project, they need Sterling's Ordnance Survey data to produce the base mapping for everything from safety packs to feasibility studies.

“ Sterling Geo is different because they can cookie-cut sections of maps into the exact size and shape that we need saving us money. **”**

For one recent project, QC Data was asked to survey a 6km stretch of a utility network. Sterling Geo provided the aerial imagery and MasterMap data.

“ Sterling Geo provided the imagery swiftly, cost effectively and in a format that we needed. **”**

Instead of providing several 1x1km tiles, we created a mosaic using FME and cut the image to show just 50m either side of the area of interest.

This allowed QC Data to effectively analyse the plot without interference.
