

Case Studies - Training Courses

“ I trust the knowledge and experience Sterling Geo have in working with FME and knew they could help us to deliver our promised business benefits.”

Michael Wallace, Network Data Manager, Network Rail

Network Rail use FME to help them to assess the relative accuracy of the data they use, thus allowing them to assign a quality value to the data. Network Rail then use this information for supporting key business decisions.

Gavin taught the attendees various skills, including the optimal way to design workspaces to speed up their workflow and how to use the transformers within FME to improve their expertise on manipulating the data.

Sterling Geo has trained nine members of Michael Wallace’s team at the purpose built training centre in Loughborough, Leicestershire. Gavin Park, an accredited FME trainer with over 10 years experience in FME, led each session.

“ I was keen to engage with Sterling Geo to help us get the most from FME.”

Having recently come back from the training course, Michael tells us that a new FME user was able to build a workbench to help monitor usage statistics on some of the products that they publish on their portal. The workbench pulls data from three individual sources and runs various formatting and matching queries until they can identify the usage statistics.

“ I received nothing but positive feedback from every member of my team who attended the training courses.”

For more information on our training courses, please call us on **0800 912 0988**.
